Arimoclomol for BUB1B-MVA

Conditional preclinical repurposing proposal

Can this candidate restore functional BubR1?

adriamasnou
MVA Hackathon 2026

No drug rescue experiment has been performed.

Variant abundance and function

Phase is inferred. N1002K function remains unmeasured.

Protein amount

Expression, turnover and localisation

Protein function

Full-length WT and variant compared at matched abundance

Possible outcomes: abundance-limited, function-limited, mixed or indeterminate

Three experimental gates

1 **Qualify the model**

Full-length protein and controls

2 **Check exposure and response**

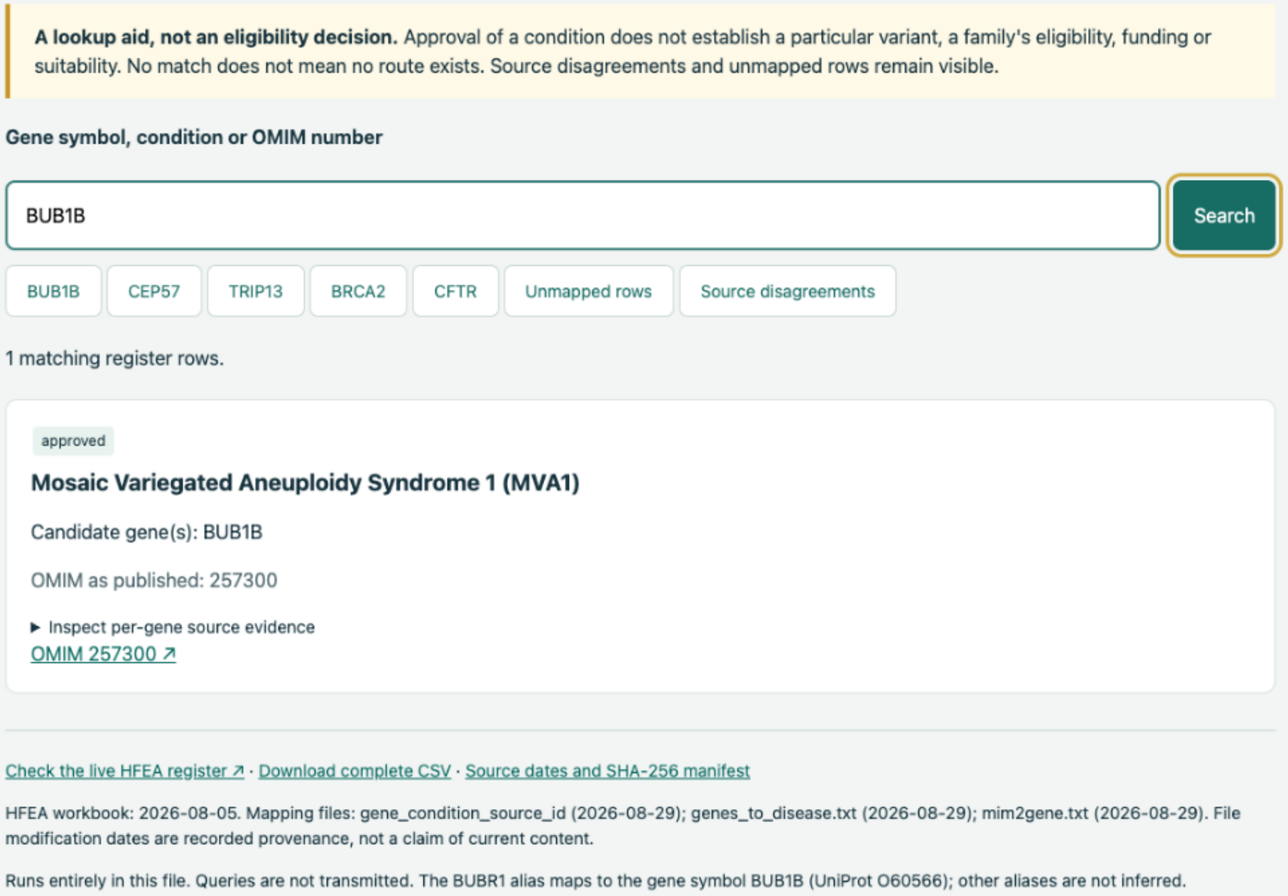

Test the clinically anchored range

3 **Require chromosome-segregation benefit**

Track division, survival and selection

Failed controls: indeterminate. Imprecise benefit: inconclusive.

Gene-to-condition navigator

Confirm eligibility with the clinic.

Six model controls passed

Real SpliceAI inference

6 positive and negative model controls

9 injected failures rejected by a separate checker self-test

Missing inputs return NOT RUN. These checks do not measure clinical accuracy.

The next experiment

Does N1002K retain function that arimoclomol can rescue?

Delivered now

Code, source trail and
a proposed laboratory protocol

Evidence still needed

Independent functional rescue
at relevant exposure
